

Flowchart Breakdown

1. Name input

- Description / Function: `reset_game()` builds fresh `active_pool` from questions.

2. Instructions

- Description / Function: Static rules screen; pressing Enter moves to Playing.

3. Playing

- Description / Function: `process_guess()` compares guess to word, char by char.
- Branches:
 1. Leads to Wrong answer on an incorrect input.
 2. Leads to Correct answer on a right input.

4. Wrong answer

- Description / Function: Lives - 1; loops back to Playing unless lives hit 0.
- Transitions:
 1. Retry: Loops back to Playing.
 2. 0 lives: Leads to Game over.

5. Correct answer

- Description / Function: Score +10, `pop()` next question, or Win if pool empty.
- Transitions:
 1. Next word: Loops back to Playing.
 2. Pool empty: Leads to Win.

6. Endgame States

- Game over (Red box)
- Win (Green box)
 1. Description / Function: `update_leaderboard()` saves score to leaderboard list. All questions answered also saves to leaderboard.

7. Leaderboard / history

- Description / Function: `sort()` leaderboard by score; L and H key presses switch views.
- Transition:
 1. Dashed line loops back to Instructions to restart.
